- Work with guidance of senior developer Team Lead to manage large, complex design projects for corporate clients.
- Carry out quality assurance tests to discover errors and optimize usability.

Project Description:
1 Multivendor

I developed a favorite personal project—a multivendor E-commerce website similar to platforms like Amazon or Daraz. It features four panels: website, admin, vendor, and custom. The site supports four shipping methods (free, country-wise, weight-wise, flat rate) and integrates PayPal for seamless payments. Built using the Laravel framework

https://e-mart.webguro.com/

2 Penting selling website

I crafted an online handmade painting marketplace utilizing Vue.js for a dynamic frontend and backend API. Vendors globally register accounts to showcase and sell their paintings, with the platform administratively charging a 20% commission.

Key Features:

- Enables seamless application and management of discount coupons.

- Distinguish between Best Sellers, New Sellers, Trending Sellers, and more to enhance user experience.

- Multiple shipping options including weight-based, free shipping, country-specific charges, and product-specific rates.

- Integrated Stripe payment gateway ensures secure and efficient payment processing.

This platform not only offers a user-friendly experience but also provides a robust infrastructure for artists to showcase their work and for art enthusiasts to explore and purchase with confidence.

3. Online raffle system

I developed an online raffle system website for educational purposes. Here's how it works:

1. Administrator functionality: Admin uploads various raffles such as Motorcycles, Mobiles, Net Cash, etc. ◦ During the upload, the admin sets the raffle's start date, end date, total quantity, and price.

2. Automated Process: ◦ The system operates automatically. When the end date and time of a raffle, such as a Motorbike raffle, is reached, the system randomly selects a winner. ◦ An email notification is automatically sent to the winner, providing seamless communication. This design ensures a user-friendly and automated experience for both administrators and participants in the raffle system. https://raffle.webguro.com/
